# A Place for Children to Grow

With over 30 years of combined experience, the founders of Stepping Stones Early Childhood Center have been supporting children and families to be their very best! And we'd love to do the same for yours!

## Our Mission & Philosophy

Our mission is to provide nurturing, safe, age-appropriate educational programs for children. Our focus is to provide an environment that is stimulating and promotes social-emotional, physical and cognitive development.

We believe that good childcare depends upon consistent care-giving in a safe environment. Children grow and learn best in an environment that provides opportunities to explore, create and communicate with other children and adults.

# PROGRAMS

## Infant

The infant program includes those children who are from the age of six weeks until the age of 14 months. The program focuses on loving care to support children to grow and develop to their full potential. The schedule is flexible; children eat, sleep and play according to their own needs. Our program supports every child's individual and unique needs. We provide a creative and stimulating atmosphere to encourage visual, language, gross and small motor experiences to enhance learning through a child's own curiosity.

## toddlers & twos

Your child deserves every opportunity to succeed in life, and it starts with ensuring their proper development in all domains. At SSECC we use The Creative Curriculum to ensure that our younger students are learning and developing at their optimal potential.

Given the young age of these children, education is embedded in play. The toddler program encourages children to pursue their own curiosities and learn through stimulating experiences. We place a strong emphasis on promoting inquisitiveness and fostering self-confidence.

## preschool

Preschoolers are children aged 36 to 60 months. Children at this age are improving coordination, learning complex skills and beginning to interact more with their peers. Our preschool program introduces topics in Science, Technology, Engineering, Arts and Math (STEAM) at developmentally appropriate levels to encourage development in all domains.

SSECC will be using The Creative Curriculum which is an evidence-based practice model for the development of the young mind and

body that follows the DAP (developmentally appropriate practice) model. This includes thematic units, hands-on experiences, daily small and large group instruction. This is a full-day program that can be modified into a half-day program according to your needs.

## School Age

The School-Age program serves children 5 years and older. It is a great transition to formal schooling. Children will be introduced to a more structured learning environment. The School-Age classroom includes small and large group activities to encourage developing social skills, math and literacy skills. We also incorporate hands-on learning to promote the arts, creativity, science, and logic. Relationship building, cognitive skills, and motor skills are all refined and encouraged to further your child's independence. Academic activities are balanced with physical as well as social-emotional domains. This can be offered as a full-day program, a before/after program or a combination of the two according to the school schedule.
